**Bolzano Villettri introduces the new Bellagio Line with counter-aperture and semi-counter-aperture for any Customer's wishes**

**Las Vegas, Nevada, January 5, 2006 - Bolzano Villettri is proud to introduce at CES 2006 the new Bellagio line of exceptional sound quality loudspeakers.**

Trends come and go – but many a trend comes back: What was showcased by numerous exhibitors at the International Furniture Fair in Milan in September 2005 is on its way into living rooms now. Dark, black-brown pieces of furniture before walls in cherry or mat black are definitely en vogue. And the perfect match is a loudspeaker set in black and dark cherry colors.

Bolzano Villettri positions the new Bellagio model line-up in the high – class segment of its comprehensive loudspeaker portfolio. The new models are called BG 780, BG 760, and center channel BG 720. All three devices are based on the counter-aperture principle of sound wave distribution.

The combination of elegant design and high musical qualities makes the Bellagio series a real showpiece. Besides the brilliant stereo sound characteristics, the sound is perfect for home theater enjoyment. RoundStream coupled with PilotEdge Technology also makes watching movies in the living room a great acoustic experience.

Both BG780 and BG760 come with SEAS 5” polypropylene cone bass/midrange, magnetically shielded drivers to provide impressive true-to-life sound. The Bellagio line-up is also equipped with 1.125” soft dome Morel tweeters.

With the RoundStream technology, the Bellagio loudspeaker line has an effective tool for 360° sound reproduction. Unlike standard speaker systems, where you must set up the sound picture and position the listener in the middle of the room, this set ensures that wherever the listener is in the room, he will get the same sound quality with no special installments needed. The result is surround sound with a rich, lifelike ambience that pulls viewers right into the action.

Three new models are coming out in black leather coupled with optional dark cherry or light oak wood veneers. Estimated retail sales start at the end of February 2006.
